

We've made your captioning experience more customizable to fit your needs. A recent update to your ClearCaptions Phone includes a new option for changing the speed of captions as they appear on your screen. You can adjust the speed on the Home screen during a call or in the Settings section when you are not on a call. ***See how easy it is!***

During a call:

NEW: Tap the **Speed** button at the bottom of the screen to adjust how quickly captions will appear on the screen. (If these buttons are not visible, look for and tap **Options**.)

Choose from two Speed options available – **Option A (current speed)** and **Option B (faster)**. Your captions will refresh before changing speed.

For example, if someone is speaking quickly, you want your captions to drop faster so you are not behind in the conversation. If someone is speaking more slowly, you may not need to speed up the speed of the captions and may want to use **Option A**. You may need to reduce the size of your font while using the faster caption speed.

Your selection will be saved for future calls until you change it again. Tap the **Speed** button again to change back to the option you started with.

From the Settings Menu:

To get started, from the **HOME** screen tap the **SETTINGS** icon and the **SETTINGS** menu will open.

On the **SETTINGS** menu find and tap the **PHONE** option to open the Phone Settings.

On the **PHONE** settings find and tap the **CAPTION SETTINGS** option to open the options. Then tap **Caption Display**

Adjusting Speed

Choose from two Speed options available – **Option A (current speed)** and **Option B (faster)**. Your selection will be saved for future calls until you change it again.

From here you can also adjust font size and color.
